👤 Profile

Versatile and results-oriented professional with strong expertise in both Data Analysis and Machine Learning. Proficient in Python, SQL, and data visualization tools including Power BI and Excel, with a proven track record of extracting insights from complex datasets to support strategic decisions. Skilled in building, training, and deploying scalable machine learning models using Scikit-learn, TensorFlow, and PyTorch. Experienced in cloud-based model deployment on AWS EC2 instance for real-time analytics and automation. Certified in Power BI and capable of delivering impactful dashboards and business intelligence solutions. Adept at combining analytical thinking with technical innovation to solve real-world problems and drive data-driven transformation across business environments

🎓 Education

2021 – 2024 Jaipur	Bachelor Of Computer Application (Artificial Intelligence and Machine Learning) The ICFAI University
-----------------------	--

💼 Professional Experience

06/2024 – present Jaipur	Python Developer CBI Solution PVT LTD Developed, tested, and maintained high-quality machine learning projects using Python, while also working as a Data Analyst. Gained expertise in analyzing data, building predictive models, and delivering actionable insights. Successfully managed deadlines, improved workflow efficiency, and collaborated with cross-functional teams to achieve project goals. Additionally, developed frontend interfaces using HTML, CSS, and integrated them with backend logic using Python Flask to create complete, user-friendly web application
05/2023 – 07/2023 Jaipur	Junior Machine Learning Engineer BMP Infotech Successfully completed an internship at BMP-INFOTECH as a Junior Machine Learning Engineer , where I developed multiple minor and major machine learning projects. This experience led to a significant enhancement of my technical skills, resulting in a 100% growth in my practical understanding and application of machine learning concepts.

Skills

Programming Languages

Python, R Language, HTML, CSS

Data Analytics & BI

- Data Visualization
- Business Intelligence
- Power BI (Dashboards, KPIs)
- Excel (PivotTables, Charts)

Web Development & Integration

- Flask (Backend Integration)
- Frontend Design (HTML, CSS)
- Responsive UI Development

Soft Skills

Problem-Solving | Communication | Team
Collaboration | Critical Thinking | Adaptability | Time
Management | Attention to Detail | Continuous
Learning

Data Science & Machine Learning

- Supervised & Unsupervised Learning
- Natural Language Processing (NLP)
- BERT & LLM Models
- Scikit-learn, NumPy, Pandas, Matplotlib, Seaborn, Tensorflow, Pytorch

Cloud & Deployment

- ML Model Deployment on AWS
- Hosting & Running Live Servers

Databases

- MySQL
- SQLite

Tools & Platforms

AWS EC2 | GitHub | Jupyter Notebook | Google Colab
| Visual Studio Code | Anaconda | Power BI | MySQL
Workbench | Flask |

Projects

Digital Portfolio with AI Chatbot Integration

Technologies Used: HTML, CSS, Python, GitHub, Flask, NLP

Developed and deployed a personal digital portfolio using HTML and CSS, hosted on GitHub Pages. The portfolio showcases my resume, technical skills, and project work in a structured and interactive format. Integrated a custom-built AI chatbot using Python and Flask, capable of answering queries related to my skills, experiences, and project details by leveraging natural language processing. This project highlights my full-stack development skills and ability to merge AI capabilities with frontend technologies for an engaging user experience.

AutoValue-ML/AI-Powered-Used-Car-Valuation-Platform

A modern, interactive web application that predicts used car prices using machine learning. This Flask-based application features a card-based UI for input selection and provides instant price estimations.

Emotion Detection System

Technologies Used: HTML, CSS, Python, Image Processing, Flask, Machine Learning

Designed and deployed a real-time emotion detection model using machine learning and computer vision. Integrated the model into a web application using Python and Flask, enabling real-time video and image-based emotion recognition. Implemented advanced analytics to assess user emotions dynamically.

Sentiment Analysis using NLP and BERT

Developed sentiment analysis models for SMS spam detection and tweet analysis using advanced NLP techniques and BERT transformer models.

Web Scrapping for E-Commerce Analytics

Scraped product details from Flipkart, including descriptions, prices, and ratings, and stored the data in a structured backend database for further analysis.

Certificates

- Generative AI By Google Cloud
- SQL by Hacker rank
- Power BI Certification (Advanced Dashboards & BI Tools)
- Introduction to python by Red hat
- Web Scrapping Project Certification
